

# Airport Activity Log

Use this worksheet to log activity at your airport. In doing so, you will gain a better understanding of the aviation operations at your airport. It is suggested that this log be kept in a FBO or general aviation terminal to capture the maximum number of operations, or both locations if they exist for maximum participation.

## Notes:

- When entering arrival and departure times, be sure and note either AM/PM or use 24-hour time.
- The N-Number is an aircraft's unique registration number, usually located near the tail of the aircraft. All FAA registrations begin with the letter 'N' and are followed by up to five (5) numbers or a combination of numbers and letters. Aircraft registered in other countries begin with letters other than 'N'.
