# **SECTION 7**

# OWNERS' RIGHTS AND REMEDIES AND ALTERNATIVES TO LITIGATION

#### A. OWNERS' RIGHTS AND REMEDIES

#### 1. Introduction

Owners are entitled to have their construction contracts fully performed. A contractor's failure to perform is a breach of contract, entitling the owner to damages. Generally, an owner's damages for breach are of two types: damages for delayed performance and damages for defective performance. Damages for delayed performance is usually addressed by a liquidated damage clause in the construction contract as discussed earlier. The second type of damages, defective performance, and other related issues are discussed in this subsection.

#### 2. Contract Performance

As a general rule, contractors must strictly comply with contract specifications.<sup>3</sup> The owner is entitled to receive full performance with the contract specifications, even if that exceeds what is necessary for a satisfactory result.<sup>4</sup> In addition, the strict compliance rule enhances the integrity of the competitive bidding system by requiring contractors to bid on the basis of meeting contract requirements.<sup>5</sup>

The strict compliance rule, however, is not absolute. Once the work is complete, the rule is tempered by the doctrine of substantial completion. Under this doctrine, the owner is legally required to accept nonconforming work in exchange for a reduction in the contract price.<sup>6</sup>

Substantial completion of a construction contract occurs where the work is substantially complete and the structure or facility can be used for its intended purpose. The contract may define when substantial completion occurs. For example, the WSDOT defines substantial completion as work that, "has progressed to the extent that the Contracting Agency has full and unrestricted use and benefit of the facilities both from the operational and safety standpoint and only minor incidental work...remains to physically complete the total contract."

Substantial completion has other legal consequences in addition to allowing the contractor to recover for the value of its work. Liquidated damages are not assessed after substantial performance has occurred. Once substantial completion is achieved, liquidated damages may be reduced, and further overruns in contract time are assessed based on direct engineering and other related costs until all of the contract work has been physically completed. Another consequence is that once substantial completion is achieved, the contract cannot be terminated for default.

The doctrine of substantial completion is an equitable doctrine, designed to avoid forfeiture<sup>12</sup> and economic waste.<sup>13</sup> The doctrine only applies where the contractor acted in good faith, and its failure to perform fully was not intentional.<sup>14</sup>

<sup>&</sup>lt;sup>14</sup> 13 AM. JUR. 2D Building and Construction Contracts § 47; 41 A.L.R. 4th 131, 189.

#### 3. Remedies for Defective Performance

#### a. Repair or Replacement of Defective Work

The general measure of damages for defective performance is the lesser amount of either: (1) the reasonable cost of remedying the defects or omissions, or (2) the difference between the market value of the performance actually rendered and the market value of what the owner would have received, if the contract had been fully performed.<sup>15</sup>

But what if the structure or facility has no market value? This is usually the case with respect to most public improvements such as bridges and highways, because they are not bought and sold, and therefore have no market value.16 In such cases, the market value rule does not apply, and the public owner is entitled to recover damages based on the reasonable cost of remedying the defects or omissions.<sup>17</sup> The application of the "cost to remedy" rule will not apply where the cost would be so clearly unreasonable as to constitute "economic waste."18 However, the doctrine of economic waste does not apply where the defects or omissions affect the integrity of the structure. 19 Also, there can be no substantial performance where the defect is structural, because the defect affects the soundness of the building and its use for its intended purpose.20 In the

absence of substantial performance, the owner may only be liable in *quantum meruit* to the extent that the work performed has some actual value to the owner.<sup>21</sup> But some courts have denied the contractor any recovery.<sup>22</sup>

The owner is obligated to specify the items of work that have to be corrected and provide the contractor with a reasonable opportunity to correct them.<sup>23</sup> A refusal by the owner to allow the contractor a reasonable opportunity to correct the defects is a breach and may waive the defects.<sup>24</sup>

### b. Reduction in the Functional Life of the Improvement

Public owners should be entitled to recover for the reduction in the functional life of an improvement when repairs are not feasible. One example is a paved road. Under normal wear and tear, the road should be useable for a certain number of years before it has to be repaved.

Assume for example that a road that is properly constructed has a functional life of 20 years. Assume further that defects in the surface of the road have reduced the road's functional life to 15 years. In this sense, the road's value has been reduced by 25 percent (functional life: 15 years instead of 20 years, or 25 percent of what it should have been). To make the owner whole, it should be entitled to a 25 percent reduction in the contract price.<sup>25</sup>

An alternative to a reduction in the contract price is an agreement by the contractor to repave the road at its own expense if the road wears out sooner than it should. An agreement of this type should be guaranteed by a commercial surety bond in case the contractor is no longer in business when the road wears out.

## c. Disincentive Specifications as Liquidated Damages for Defective Work

Another variation in quantifying damages for substandard work is the use of disincentive clauses. Disincentive clauses establish the outer limits of performance: work that is superior and work that is unacceptable. The specification establishes a graduated payment schedule for work between those two levels. Payment for work that is substandard but acceptable will be reduced in accordance with the graduated payment schedule. Those downward adjustments are ap-

<sup>&</sup>lt;sup>17</sup> Granite Constr. Co. v. United States, 962 F.2d 98 (Fed. Cir. 1992), cert. der., 506 U.S. 1048 (1993). Commercial Contractors v. United States, 154 F.3d 1357 (Fed. Cir. 1998); Restatement (Second) Contracts § 348 (1981); Rhode Island Turnpike and Bridge Auth. v. Bethlehem Steel Corp., 379 A.2d 344 (R.I. 1977) (cost to correct defective painting on bridge did not constitute "economic waste," even though cost was approximately 25 percent of \$19 million contract price).

<sup>&</sup>lt;sup>18</sup> Economic waste occurs when the cost of remedying defects is clearly disproportionate to the probable loss in value caused by the defects. Commercial Contractors v. United States, 154 F.3d 1357 (Fed Cir. 1998); Restatement (Second) Contracts § 348 (1981).

plied to the unit bid price, reducing the amount paid for the work.  $^{^{\rm 26}}$ 

The legal question that the use of disincentive clauses raises is whether such clauses are a penalty and thus unenforceable, or liquidated damages and thus enforceable. For example, in *Complete General Construction v. Ohio Department of Transportation*, the specifications for the construction of concrete pavement provided that the contractor was to be paid in proportion to the degree that the work complied with the standard specifications in the contract. Under this provision, the contractor was paid less than the contract price when the work failed to meet minimum acceptable standards. The contractor sued, claiming that the disincentive clause was a penalty, and thus unenforceable. The court disagreed, holding that the clause was a valid liquidated damage clause.

A disincentive clause, to be enforceable, must be a reasonable means of estimating damages that cannot otherwise be easily computed. A disincentive clause that is found to be a penalty is void, and the owner must prove actual damages.<sup>28</sup> In this regard, care should be taken in justifying and quantifying the liquidated damage provisions.<sup>29</sup>

#### d. Administrative Setoffs

The cost of remedying defective work may be withheld by the owner from money owed to the contractor, usually from contract payments or retainage. This is a form of "self-help" recognized by the common law as an administrative setoff. The Government has the same right as any creditor to setoff debts owed the Government by the contractor against an indebtedness that the Government owes the contractor.<sup>30</sup>

The right extends to setoffs between separate contracts that the owner has with the contractor.<sup>31</sup> The deduction may be made even though the debt owed by the contractor is unliquidated and arose from a separate transaction.<sup>32</sup> The contractor can challenge the

setoff, and a board or court can determine whether the withholding was proper. This protects the contractor against withholdings that are unwarranted or improper. The Deductions should be reasonably prompt so that the contractor's position with its subcontractors is not prejudiced. The Deduction of the Deductio

The right to setoff has some limitations. The right does not extend to contract payments owed to a performance bond surety for completing the contract after the original contractor has defaulted. When the surety pays construction expenses under its performance bond obligations, it receives the contract proceeds free from setoff by the government, because the surety receives the proceeds as a subrogee of the government as well as the contractor. The government, however, is entitled to setoff debts owed by the original contractor against contract proceeds claimed by the surety under its payment bond.

The rule that the payment bond surety's claim to contract proceeds is subordinate to an owner's right of setoff does not apply to contract retainage withheld by an
owner for the benefit of subcontractors, materialmen,
and laborers. When a surety pays those claimants after
the contractor has failed to pay them, the surety is subrogated to the claimant's rights to the retainage. That
right of subrogation is superior to the owner's right of
setoff against the contract retainage.<sup>38</sup> Whether a
surety can enforce that right against a state agency
holding retainage depends upon whether the state has
waived sovereign immunity.<sup>39</sup>

#### 4. Unauthorized Acceptance of Defective Work

Ordinarily, project inspectors are not authorized to alter the contract by accepting work or materials that do not conform to contract specifications. Usually, the authority to change or modify the contract is vested in

the engineer for state construction contracts,  $^{40}$  and in the contracting officer for federal construction contracts.  $^{41}$ 

As a general rule, the Federal Government and state governments are not bound by the unauthorized acts of their representatives.<sup>42</sup> The doctrine of "apparent authority," which allows private parties to be bound by the unauthorized acts of their agents, clothed with apparent authority to act on their behalf, does not apply to federal and state governments.<sup>43</sup>

However, an unauthorized acceptance may bind the government, if it is ratified by a person whose actual authority is to accept nonconforming work or materials. At Ratification occurs when the ratifying contract official has knowledge of the unauthorized acceptance and expressly or impliedly approves the acceptance. However, ratification will not be applied where the contractor does not prove that the person with authority to bind the government had knowledge of the unauthorized acceptance and either expressly or tacitly approved it. The source of the unauthorized acceptance and either expressly or tacitly approved it.

The unauthorized acceptance may be used by the contractor as proof that its interpretation of the specification, which coincided with the inspector's, was reasonable.<sup>47</sup> The contractor is entitled to perform in accordance with its interpretation of the contract, provided that its interpretation was reasonable.<sup>48</sup>

#### 5. Latent Defects

Contract specifications usually address defects in construction discovered after final acceptance has occurred. Some specifications reflect the common law rule that final acceptance, without any reservations, waives defects in construction that the owner knew about, or could have discovered by the exercise of reasonable care. 49 Only patent defects are waived; latent defects survive acceptance because they are unknown and therefore cannot be voluntarily waived. 50

Contract specifications, based on the common law rule, typically provide that acceptance is final and conclusive except for latent defects, fraud, gross mistake amounting to fraud, or rights under contract warranties. <sup>51</sup> Under this type of clause, the owner has no remedy for defects discovered after final acceptance unless the defect is latent, the result of fraud, or covered by warranty. <sup>52</sup>

Some states include "anti-waiver" provisions in their contracts. These specifications negate any inference that patent defects are waived because of final acceptance. For example, the specification may provide that:

The Department shall not be precluded or estopped by any measurement, estimate, or certificate made either before or after the completion and acceptance of the work and payment therefor, from showing the true amount and character of the work performed and materials furnished by the contractor, nor from showing that any such measurement, estimate, or certificate is untrue or is incorrectly made, nor that the work or materials do not in fact conform to the contract. The Department shall not be precluded or estopped, notwithstanding any such measurement, estimate, or certificate and payment in accordance therewith, from recovering from the contractor or his sureties, or both, such damage as it may sustain by reason of his failure to comply with the terms of the contract. Neither the acceptance by the Department, or any representative of the Department, nor any payment for or acceptance of the whole or any part of the work nor any extension of time, nor any possession taken by the Department, shall operate as a waiver of any portion of the contract or of any power herein reserved, or of any right to damages. A waiver of any breach of the contract shall not be held to be a waiver of any other or subsequent breach.

Under this type of specification, the owner does not waive its right to damages for patent defects discovered after final acceptance. To establish waiver, the contractor must prove that the owner intentionally waived the

defect by accepting the work without reservation.<sup>54</sup> "Anti-waiver" clauses reveal the intent of the parties to eliminate the binding effect of final acceptance of the work.<sup>55</sup>

One survey revealed that claims made by some States for defective work discovered after final acceptance were either settled administratively or shortly after litigation commenced. There are probably various reasons why contractors chose to settle. First is the contractor's desire to maintain its reputation and good will with the agency. A second reason is the merits of the agency's claim. The contractor, of all the parties, should be able to recognize whether the work is defective. Third is the cost of litigation, if the claim is not settled. And finally, in most cases, it is probably cheaper for the contractor to effect repairs than to pay the owner the cost of having someone else do the work.

In the absence of an "anti-waiver" clause, the key determination in most litigation involving defects discovered after final acceptance is whether the defect was patent or latent.<sup>57</sup> This is largely a matter of proof. The owner, to establish liability, must prove that the defect was latent, that it existed before final acceptance, and did not occur after the project was accepted.<sup>58</sup>

# 6. Statutory Time Limitations as a Bar to Recovery for Construction Defects Discovered After Final Acceptance

a. Statutes of Limitation and Statutes of Repose—How They Differ

Statutes of limitation and statutes of repose are similar in that both prescribe time periods within which lawsuits must be commenced. They differ as to when the time periods begin to run. <sup>59</sup> A statute of limitations usually begins to run when the claim accrues. Generally, a claim accrues when a claimant or potential claimant knew or should have known, through reason-

able diligence, that it had a claim for which relief from a court could be sought.  $^{60}\,$ 

A statute of repose begins to run from a certain event specified in the statute. Statutes of repose that apply to improvements to real property usually specify substantial completion of the improvement as the event that causes the statute to run. Conce the statutory time period has elapsed, the claim is extinguished and cannot be revived. A statute of repose reflects a legislative policy determination that, a time should come beyond which a potential defendant will be immune from liability for his past acts and omissions."

Under a statute of limitations, a contractor is subject to potential liability until the claim accrues and the time period for commencing suit has elapsed. <sup>65</sup> Under a statute of repose, any liability for construction defects is extinguished once the time period has run even though the owner is unaware that it has been damaged, because the defect did not manifest itself until after the statutory period had elapsed. <sup>66</sup> In short, time ran out before the owner had an opportunity to pursue relief for the defect. <sup>67</sup>

Whether a particular statute is a statute of limitations or a statute of repose is a question of statutory construction. <sup>68</sup> Usually, a statute is characterized as a statute of repose if the statutory period for commencing suit is triggered by the occurrence of an event, irrespective of whether the potential plaintiff knew or should have known that he or she had a cause of action. <sup>69</sup>

We recognize the fundamental difference in character of [the statute of repose] provisions from the traditional concept of a statute of limitations. Rather than establishing a time limit within which action must be brought, measured from the time of accrual of the cause of action, these provisions cut off the right of action after a speci-

fied time measured from the delivery of a product or the completion of work. They do so regardless of the time of the accrual of the cause of action or of notice of the invasion of a legal right. <sup>70</sup>

In addition to the question of how a limitations statute should be classified, there may also be issues regarding the constitutionality of a statute of repose and whether a limitation statute applies to actions brought by a state in its own behalf. These issues are discussed in the following subparts of this section.

#### b. Constitutionality-Statutes of Repose

Statutes of repose have been declared unconstitutional in a few states on several grounds. First, the statutes have been viewed as providing special immunity from suit to architects, engineers, and contractors without specifying a rational basis for immunity. Second, the statutes denied open access to the courts, thou texpressing a strong public necessity for the provision. Access was denied because the statute could extinguish a potential cause of action before a person knew that it has been injured by defective or negligent construction.

Several states have reenacted their repose statutes, after the statutes were declared unconstitutional, specifically spelling out the public necessity for their creation. For example, in *Craftsman Builder's Supply v. Butler Mfg.*, the court said,

In enacting that statute, the legislature specifically found that exposing providers to liability after the possibility of injury has become highly remote is a clear social and economic evil in that it creates costs and hardships to providers and citizens of the state which include (1) liability insurance costs, (2) records storage costs, (3) un-

due and unlimited liability risks during the life of both a provider and an improvement, and (4) difficulties in defending against claims asserted many years after completion of an improvement (citation omitted). To remedy this perceived evil, the legislature enacted Utah Code Ann. § 78—12-25.5, which eliminates an injured party's remedy for injury to person or property arising out of an improvement to real property after a set number of years when the possibility of injury and damage becomes highly remote and unexpected. <sup>76</sup>

The reenacted Florida and Utah statutes have been held constitutional. These jurisdictions now follow the majority of state courts, which hold that statutes of repose are constitutional. One study has revealed that the vast majority of claims brought for design defects were brought within 10 years after the improvement was completed.

#### c. Nullum Tempus

Under the common law doctrine of *nullum tempus*, <sup>80</sup> a state and its agencies were exempt from statutes of

Bauld v. J.A. Jones Constr. Co., 357 So. 2d 401, 402 (Fla. 1978); see also Univ. of Miami v. Bogorff, 583 So. 2d 1000, 1003 (Fla. 1991); Craftsman Builder's Supply v. Butler Mfg., 974 P.2d 1194, 1202 (Utah 1999).

<sup>&</sup>lt;sup>71</sup> Phillips v. ABC Builders, 611 P.2d 821 (Wyo. 1980); Loyal Order of Moose Lodge 1785 v. Cavaness, 563 P.2d 143 (Okla. 1977); Broome v. Truluck, 241 S.E.2d 739 (S.C. Super. 1978). In McFadden v. Ten-T Corp., 529 So. 2d 192, 198 (Ala. 1988), the court noted that statutes of repose were often the result of lobbying efforts by the American Institute of Architects, the National Society of Professional Engineers, and the Associated General Contractors of America.

<sup>&</sup>lt;sup>72</sup> Thirty-eight states have open court provisions in their constitutions. Craftsman Builder's Supply v. Mutler Mgf., 974 P.2d 1194, 1204 (Utah 1999) (citing David Schumau, *The Right to a Remedy*, 65 TEMP. L. REV. 1197, 1202, n.25 (1992)). The Utah open courts clause provides in part that, "All courts shall be open and every person...shall have remedy by due course of law." Utah Const. art. I, § 11.

Central Heating & Plumbing Co., 503 P.2d 108 (1972). The following law review articles discuss the constitutional implications raised by statutes of repose: 18 CATH. U. L. REV. 361 (1969); 38 VAND. L. REV. 627 (1985); 65 TEP. L. REV. 1101 (1994). See also 25 Pub. Cont. L. J. 1101 (1996).

<sup>&</sup>lt;sup>79</sup> Gibson v. Department of Highways, 406 S.E.2d 440, 447 (W. Va. 1991) (citing study showing that 99.6 percent of claims for design and defective construction are brought within 10 years).

<sup>&</sup>lt;sup>80</sup> Nullum tempus is derived from "nullum tempus occurri regi," which is translated as "time does not run against the King." BLACK'S LAW DICTIONARY 1069 (6th ed. 1990); Rowan Cty. Bd. of Educ. v. U.S. Gypsum, 418 S.E.2d 648, 653 (N.C. 1992); Guaranty Trust Co. of N.Y. v. United States, 304 U.S. 126, 132 (1938).

limitations generally applicable in civil lawsuits between private parties. Historically, the *nullum tempus* doctrine was based upon sovereign power and prerogative. The contemporary *nullum tempus* doctrine is based on public policy: The public should not suffer because its officials failed "to promptly assert causes of action which belong to the public."

Several states have codified the common law rule of *nullum tempus* by enacting statutes that exempt the states from the operation of a statute of limitations unless the statutes, by their terms, expressly include the states. A number of states, however, have taken a different tack by abrogating the *nullum tempus* doctrine, either statutorily or though court decisions. The following table lists each state where the limitations apply to lawsuits brought by the state, unless a pertinent statute expressly excludes a state from the operation of a statute of limitations. Table A provides citations to the applicable statutes or court decisions that have abrogated *nullum tempus*, the applicable limitation period affecting claims for defective construction, and the event that triggers the running of the statute.

# TABLE A

STATE	NULLUM TEMPUS ABROGATED BY:	TIME PERIOD, TRIGGERING EVENT,		
SIMIL	indicontribution.	AND STATUTE		
Alaska	Stat. 9.10.120 (1997).	Six years from accrual of cause of action. STAT. 9.10.120 (1997).		
California	Civ. Proc. Sec. 345 (1984).	Within 4 years after discovery, but no later than 10 years after substantial completion. Civ. Proc. 337.15 (1982).		
Colorado	Abrogated by court decision: Shootman v. Dept. of Trans., 926 P.2d 1200 (Colo. 1996).	Within 2 years after claim accrues, but not more than 6 years after substantial completion. Rev. Stat. 13-80-104 (2001).		
Florida	STAT. ANN. 95.011 (1977).	Four years after defect is discovered or should have been discovered, but not more than 15 years after completion of the contract. STAT. 95.11(c) (1995).		
Georgia	CODE ANN. 9-3-1 (1933).	Eight years after contract completion. CODI ANN. 9-3-51 (1968).		
Idaho	Code 5-225 (1881).	Six years from final completion of improvement. Code 5-241 (1965).		
Illinois	Code 13-214. Use of the term "body politic" in the statute of repose included the state in its coverage. <i>People v. Asbestospray Corp.</i> , 616 N.E.2d 652 (Ill. App. 1993).	Not more than 10 years from acceptance of the improvement. CODE 5/13-214 (1993).		
Kansas	STAT. ANN. 60-521. Limitations do not apply when action arises out of governmental functions. State ex rel Schneider v. McAfee, 578 P.2d 281 (Kan. 1978).	Within 5 years after cause of action has accrued. Stat. Ann. 60-511 (1966).		
Kentucky	REV. STAT. 413.150. See Louisville & N.R. Co. v. Siler, 186 F. 176 (C.C.E.D. Ky. 1911).	Within 10 years from completion. Rev. Stat. 413.120.		
Massachusetts	GEN. L. 260.18 (1902). See Com. v. Owens-Corning Fi- berglass Corp., 650 N.E.2d 365 (1995).	Within 3 years after cause of action accrues, but not more than 6 years from the earlier of (1) acceptance of the project; or (2) opening the facility to public use; or (3) acceptance by the contractor of a final estimate prepared by the agency; or (4) substantial completion. Gen. L. 260 § 2.		
Minnesota	Stat. 541.01 (1986). See City of St. Paul v. Chicago M. & St. P. Ry. Co., 48 N.W. 17 (Minn. 1891).	Two years after discovery of defect, but not more than 10 years after substantial completion. Stat. 541.051 (1990).		
Missouri	REV. STAT. 516.360 (1929).	Within 10 years from completion of improvement, but limitation does not apply if the defect was concealed or resulted in an unsafe condition. REV. STAT. ANN. 25-218 (1991).		

Montana	CODE ANN. 27-2-103 (1991).	Not more than 10 years after completion of improvement. Stat. 27-2-208 (1999).
Nebraska	Rev. Stat. Ann. 25-218 (1991).	Within 4 years from discovery, but not more than 10 years beyond the time of the act giving rise to the cause of action. STAT. 25-223 (1976).
New Jersey	Abrogated by court decision: N.J. Ed. Facilities Auth. v. Gruzen Partnership, 592 A.2d 559 (1991). Legislature then enacted a 10-year statute of limitations applicable to state claims. STAT. 2A 14-1.1 and .2. See State v. Cruz Constr. Co., 652 A.2d 741 (N.J. Super. A.D.) (1995).	Within 10 years from completion of construction. Rev. Stat. 2A: 14-1.1 (1998). Limitation does not apply if defect arises from fraudulent concealment or gross negligence. Stat. 2B 14-1-1 B(2).
North Carolina	GEN. STAT. 1-30. Limitation only applies when state acts in a proprietary capacity. Rowan County Bd. Of Educ. v. United States Gypsum Co., 418 S.E.2d 648 (N.C. 1992).	Within 6 years from breach or substantial completion. Stat. 1-50-(5) A (1996). Limitation does not apply to defects caused by fraud or gross negligence, Stat. 1-50(5)(E).
North Dakota	Code 28.01-23 (1943).	Not more than 10 years after substantial completion. The time to commence suit is extended 2 years if the injury occurs in the tenth year after substantial completion. CODE 28-01.44 (1989).
Oregon	Code 28.01-23 (1943).	Within 10 years after substantial completion. Rev. Stat. 12.135(1).
South Carolina	Abrogated by court decision: State ex rel. Condon v. City of Columbia, 528 S.E.2d 408 (S.C. 2000).	Within 13 years after substantial completion of improvement. Stat. 28-3-202 (1980).
Vermont	Stat. Ann. 461 (1947).	Within 6 years after cause of action accrues. Stat. Ann. 511 (1959). <i>Univ. of Vermont v. W.R. Grace &amp; Co.</i> 565 A.2d 1354 (Vt. 1989).
Virginia	Expiration of the period in statute of repose extinguishes cause of action, preventing state from maintaining suit. Com. v. Owens-Corning Fiberglass Corp., 385 S.E.2d 865 (Va. 1989).	Not more than 5 years after performance of construction. Code Ann. 8-01-250 (1977).
Washington	REV. CODE 4.16.310 (1988). The statute added the state to its coverage, overruling Bellevue School Dist. No. 405 v. Braizer Const. Co., 691 P.2d 178 (Wash. 1984), which had applied nullum tempus.	Within 6 years after substantial completion of construction. Rev. Code 4.16.310 (1988). See Gevaart v. Metro Constr. Inc., 760 P.2d 348, 350 (Wash. 1988), discussing how the 6-year period can be extended.
West Virginia	Code 55-2-19 (1923). Gibson v. Dept. of Highways, 406 S.E.2d 440 (W. Va. 1991).	Within 10 years after acceptance of improvement. Code 55-2-6A (1983).
Wisconsin	STAT. 893.87 (1980). Action by state must be brought within 10 years after cause of action accrues.	Within 10 years from substantial completion. Limitation does not apply to defects resulting from fraud, concealment, or misrepresentation. Code 893.89 (1994).

The Supreme Courts of Colorado, New Jersey, and South Carolina, <sup>85</sup> as noted in the table, held that the common law doctrine of *nullum tempus* was abrogated when sovereign immunity was waived. Those courts also said that it would be anomalous that a state, which is not protected from suit by sovereign immunity, should be entitled to benefit from *nullum tempus*.

The view that abrogating sovereign immunity also abrogates *nullum tempus* has been rejected by other courts. For example, in *Rowan Cty. Bd. of Educ. v. U.S. Gypsum Co.*, the North Carolina Supreme Court said:

Further, while USG correctly notes that this Court has expressed an intent to restrict rather than extend application of sovereign immunity (citation omitted), our treatment of that doctrine does not affect our view of *nullum tempus*, which serves a different purpose. While the two doctrines share a similar "philosophical origin and have a similar effect of creating a preference for the sovereign over the ordinary citizen," (citation omitted) retrenchment on the one does not require retrenchment on the other. While limiting sovereign immunity diminishes the government's escape of its misdeeds, the same concern for the rights of the public supports retention of *nullum tempus*, as that doctrine allows the government to pursue wrongdoers in vindication of public rights and the public purse.

# 7. Damage to Structures During Contract Performance

# a. Liability for Damage

Generally, destruction of the subject matter of the contract excuses further performance, but only when performance becomes objectively impossible. To excuse performance, the impossibility must be produced by an unforeseen event that could not have been prevented or guarded against by the contractor. The fact that unforeseen events, beyond the contractor's control, make performance more difficult or costly does not excuse performance. The contractor must either perform or respond in damages. To protect itself against unforeseen events, the contractor could purchase builder's risk insurance. The cost of insurance would typically be

passed on to the owner as part of the bid price. \*\* To reduce bids and encourage competition, owners often include risk sharing clauses in their construction contracts. Such clauses allocate the risk for *force majeure* events. \*\*

Typically, these clauses excuse the contractor from responsibility for damages to the work caused by any of the events listed in the clause. <sup>90</sup> To avoid responsibility for damage to work, the contractor must show that the damage caused by one of the enumerated events in the clause was beyond the control of the contractor and did not result from the contractor's negligence. <sup>91</sup>

# b. Age and Condition of Structure as Factors in Determining Damages

Generally, public bridges and roads do not have a commercial market value, because ordinarily they are not bought and sold. Because they do not have a market value, the usual rules for determining damages to real property improvements do not apply. If the damage to the structure can be repaired without affecting its integrity and safety, the measure of damages is the cost of repair. If the structure is destroyed, the proper measure of damages is the replacement cost of a similar structure, consistent with current design standards.

The authorities disagree, however, as to whether the replacement cost of a structure should be adjusted to compensate for the age, condition, and utility of the structure. Under one view, the measure of damages for the loss of the structure is the reasonable cost of replacement by a similar structure, consistent with current design standards. The age, condition, and utility of

<sup>&</sup>lt;sup>85</sup> Shootman v. Department of Transp., 926 P.2d 1200 (Colo. 1996); N.J. Educ. Facilities Auth. v. Gruzen Partnership, 592 A.2d 559 (N.J. 1991); State ex rel. Condon v. City of Columbia, 528 S.E.2d 408 (S. C. 2000).

<sup>&</sup>lt;sup>86</sup> 418 S.E.2d 648, 657 (N.C. 1992). While the North Carolina Statute (1-30) applies to actions brought by the State in the same manner as actions brought by private parties, the Statute does not apply if the function that gives rise to the claim is governmental, because when the State acts in a governmental capacity it does not act in the same manner as a private party. See 71 N.C. L. REV. 879 (1993).

<sup>United States v. Spearin, 248 U.S. 132 (U.S. Ct. Cl. 1918); Kel Kim Corp. v. Central Market, 519 N.E.1d 295 (N.Y. 1987); Kans. Turnpike Auth. v. Abramson, 275 F.2d 711 (10th Cir. 1960); Sornsin Constr. Co. v. State, 590 P.2d 125 (Mont. 1978); 13 Am. Jur. 2D Building and Construction Contracts § 64. See § 7.B.9, supra.</sup> 

<sup>&</sup>lt;sup>88</sup> The cost to procure and maintain insurance may be high where the project is located in an area subject to severe storms or earthquakes.

<sup>&</sup>lt;sup>89</sup> Force majure clauses allocate risk. Chase Precast Corp. v. John J. Paonessa Co., 566 N.E.2d 603 (Mass. 1991) (force majure clauses allocate and excuse specific risks that might affect performance). For example, "acts of God, the public enemy or governmental authorities," Kansas Standard Specification 107.16.

the bridge are inapplicable in calculating damages.<sup>96</sup> Under the other rule, damages are calculated by taking into consideration the structure's age, utility, and condition.<sup>97</sup> These factors are considered in addition to the replacement cost of the bridge.

In addition to damages for loss of the structure, a public agency may seek damages for design costs, engineering costs, and damages to the public for increased road user costs as a result of the structure being unavailable for use. <sup>98</sup> Liquidated damages for the delay in project completion may also be recoverable. <sup>99</sup> These factors are considered in addition to the replacement cost of the bridge.

The contractor may be liable for damage to other property on, or in the vicinity of, the work site, where the damages were a foreseeable consequence of the contractor's failure to protect the work.<sup>100</sup>

# 8. Owner's Rights Against the Construction Bond Surety

#### a. Performance and Payment Bonds

All states have laws that require the contractor to obtain performance and payment bonds for public works construction contracts.<sup>101</sup> Essentially, the bond is a tripartite agreement composed of the principal (the contractor), the obligor (the surety), and the obligee (the owner).<sup>102</sup>

Performance and payment bonds are distinguished by the different obligations they impose. Under a performance bond, the surety is responsible when the contractor defaults on its contractual obligations affecting contract performance. As such, a performance bond protects the owner. <sup>103</sup> A payment bond guarantees payment to persons who furnish labor and materials to the general contractor for the public improvement. As such, a payment bond protects subcontractors, laborers, and materialmen. <sup>104</sup> This type of protection is necessary because such persons have no lien rights against public works when the contractor fails to pay them for their labor and materials. <sup>105</sup> A performance bond and a payment bond may be separate instruments, <sup>106</sup> or combined into one instrument. <sup>107</sup>

#### b. Surety's Options When the Contractor Defaults

A performance bond renders the surety liable up to the penal sum of the bond when the contractor defaults. However, a surety has several options when a contractor defaults. The contractor can let the owner complete the work and litigate the owner's claim for the cost of completing the contract in excess of the balance of the contract price, or the surety can tender the cost of completing the work, up to the penal sum of the bond, in exchange for a release discharging the surety from further liability. <sup>109</sup>

Another option is to arrange for the completion of the work by another contractor, or by the original contractor, when the contractor's cash flow problems prevented it from further contract performance. But a new completion contractor hired by the surety must be licensed to perform the type of work necessary to complete the contract. Payments by the owner for the work can be made directly to the completion contractor if agreed to by the surety, or to the surety, who then pays the contractor.

# c. Surety's Liability for Breach of the Construction Contract That Results in Latent Defects and Other Contractual Defaults

Typically, the construction contract between the owner and the contractor is incorporated by reference into the performance bond.<sup>111</sup> The performance bond and the construction contract are read together to de-

termine the surety's liability for a breach of the construction contract by the contractor. <sup>112</sup> Generally, the surety's liability corresponds with that of its principal. Thus, if the principal (the contractor) can be held liable for breach of the construction contract, so may the surety. <sup>113</sup> A surety may be liable to the owner for latent defects that result from a breach of the construction contract by the contractor. <sup>114</sup>

The surety's liability may extend to other contractual obligations that the contractor failed to perform. For example, in *Hartford Accident and Indemnity Co. v. Arizona Dept. of Transportation*, <sup>115</sup> the court said that the performance bond guaranteed the full performance of the construction contract, which required the contractor to pay unemployment insurance taxes. The surety became liable for those taxes when the contractor failed to pay them. The surety may also be liable for liquidated damages for late completion of the project caused by the original contractor's default, <sup>116</sup> although there is authority to the contrary. <sup>117</sup>

## d. Limitations on the Surety's Liability Under Its Performance Bond

As observed earlier, the surety's liability under its performance bond is limited to the penal sum of the bond. This is the general rule, 118 although the surety's liability may exceed the penal sum of the bond if it fails to act reasonably in dealing with the owner's claim. Whether a surety's refusal to pay the owner's claim amounts to bad faith is a question of fact. 120

An owner's right to recover against the performance bond surety for latent defects may be affected by a time limit within which the owner must assert its cause of action. A time limit for asserting a cause of action against the performance bond surety may be imposed by a statute or by a provision in the bond. While many states have enacted statutes establishing the limits for bringing actions against contractors for latent defects, <sup>121</sup> few have enacted similar laws dealing specifically with performance bond sureties, <sup>122</sup> although most states have laws establishing a limitation period for actions against the payment bond. <sup>123</sup>

In the absence of a special statute of limitations, a cause of action against the performance bond surety is governed by the general statute of limitations that applies to written contracts. <sup>124</sup> However, unless prohibited by statute, <sup>125</sup> the parties may agree to a time limitation (within which suit must be brought on the performance bond) that is shorter than the general statute of limitations applicable to written contracts. <sup>126</sup> Thus, parties are free to contract for any reasonable limitation period they choose, if it does not conflict with an express limitation in a public bond statute.

 $<sup>^{125}</sup>$  For example, FLA. REV. STAT. 95-03 prohibits contract provisions that allow a shorter time than that provided in the applicable statute of limitations. *See also* HAW. REV. STAT. 657-8.

<sup>&</sup>lt;sup>126</sup> Timberline Elec. Supply Corp. v. Ins. Co. of N. America, 421 N.Y.S.2d 987 (A.D. 1979); General Ins. Co. of America v. Interstate Service Co., 701 A.2d 1213 (Md. App. 1997); Alaska Energy Auth. v. Fairmount Inc. Co., 845 P.2d 420 (Alaska 1993); Howard & Lewis Constr. Co. v. Lee, 830 S.W.2d 60 (Tenn. App. 1991).

[W]e held that parties could not contract to shorten the one-year limitation period for payment bonds required by the public bond statute. However, in contrast to the provisions governing payment bonds, our public bond statute does not specify a limitation period for performance bonds. Therefore, parties entering into a public performance bond are free to contract for any reasonable limitation period they chose. <sup>127</sup> (citations omitted).

Thus, most cases involving claims against the performance bond are governed by the limitation period specified in the bond. An owner's claim against the contractor for defective construction may be time barred by a statute of repose. Is the claim against the surety barred where the general statute of limitations applicable to a claim against the surety has not expired? There are two views.

Under one view, the owner may sue the surety on the performance bond even though the limitation period in a statue of repose has expired, barring the owner's claim against the contractor. <sup>129</sup> Under the opposing view, a cause of action that is time barred against the contractor is also time barred against the surety, even though the statute of limitation applicable to the surety has not expired. This view is based on the rule that a surety's liability corresponds with that of its principal, so if the principal cannot be held liable, neither should the surety. <sup>130</sup>

#### e. Alteration of the Construction Contract

An alteration of the construction contract by the owner, without the surety's consent, discharges the surety to the extent that it is prejudiced by the alteration. This rule is obviated with respect to change orders when the bond contains a provision incorporating the construction contract by reference. By agreeing to the incorporation of the construction contract, the surety agrees in advance to changes made by the owner under the "changes" clause.

f. Disputes Over the Right to Contract Payments When the Contractor Defaults

i. Disputes Between the Surety and the Bank.—Occasionally, contractors borrow money from banks to finance their operations. Banks usually require the contractor to sign an agreement assigning future contract payments earned by the contractor to the bank to secure the loan. <sup>133</sup> In a similar fashion, sureties usually require contractors to sign a general indemnity agreement in favor of the surety. <sup>134</sup> A conflict may arise between the surety and the bank over the right to the contract proceeds when the contractor defaults. The positions of the surety and the bank in this type of dispute were summarized by the court in Alaska State Bank v. General Insurance Company as follows:

The bonding company argues that when a contractor defaults and a bonding company steps in to complete the job and pay laborers and materialmen, it is subrogated to the rights of the owner, the contractor, the laborers, and the materialmen. Since the owner could have used funds still in its hands to complete the job, there would have been no sums available for the contractor and, therefore, the contractor's secured creditor who stands in the contractor's shoes. Under this view the bonding company has first rights to the progress payment, although it may have been fully earned by the contractor's prior performance.

The bank argues that progress payments are contract rights and that the bonding company's subrogation theory merely purports to impose on them a hidden lien. The bank urges that both it and the bonding company had the power to take advantage of Article 9 of the Uniform Commercial Code and perfect their respective security interests. Under this view, the bank had prior rights since it utilized the U.C.C. while the bonding company did not. <sup>135</sup>

•••

The bank urges the court that this "classic dispute" between bank and bonding company should be resolved under the Uniform Commercial Code.

With respect to this type of dispute, the general rule is that the surety is entitled to the contract proceeds. However, there is some authority that the surety's assignment of contract proceeds is subject to the filing requirements of the Uniform Commercial Code, giving the bank priority to contract proceeds when the surety does not comply with the Code's filing requirements. 137

But what if it's not clear as to whom the owner should pay? An owner caught in a dispute between the

<sup>&</sup>lt;sup>137</sup> Transamerica Ins. Co. v. Barnett Bank of Marion County, 524 So. 2d 439 (Fla. App. 1988).

surety and the bank may have the option of filing an interpleader action. This type of action would allow the owner to seek a court order authorizing it to pay the contract proceeds into the registry of the court, discharging the owner from further liability as to whom it should pay and leaving it up to the surety and bank to litigate entitlement to the proceeds. 138

ii. Disputes Over Contract Proceeds Between the Owner and the Surety.—An owner's right to a setoff<sup>139</sup> against unpaid progress payments for its claims against a contractor that has defaulted is superior to the surety's subrogation claim under its payment bond. <sup>140</sup> However, the authorities differ on whether the owner's right is superior to the surety's subrogation rights under its performance bond. <sup>141</sup> A surety who pays the subcontractor, materialmen, and labor claims has a right to the contract retainage that is superior to the owner's right of setoff. <sup>142</sup> Whether the surety can enforce that right against a state agency may depend upon whether the state has waived sovereign immunity. <sup>143</sup>

#### 9. Owner's Rights Against Its Design Consultant

#### a. Contractual Liability

Design consultants are obligated to perform their contractual duties with the same degree of ordinary care and skill exercised by members of their profession. Failure to perform those duties is a breach of contract.<sup>144</sup>

In addition to the evidence normally admissible in breach of contract actions, the evidence may establish the consultant's breach by showing that it was negligent in performing its contractual obligations. <sup>145</sup> Generally, negligence must be proved by expert testimony, <sup>146</sup>

unless the act or omission is so obvious that lay persons can easily recognize the act or omission as negligent.<sup>147</sup>

#### b. Betterment

Should the design consultant be liable for the cost of a construction feature that had to be added during construction because it was erroneously omitted from the contract plans? Under the "betterment" rule, the answer is generally "no." Usually, liability is limited to the difference between adding the construction feature by change order and what it should have cost if the construction feature had been included in the contract bid price. The "betterment" rule puts the owner in the position it would have occupied had the error not occurred, and prevents the owner from obtaining a windfall. He of the construction of the construction is would have occupied had the error not occurred, and prevents the owner from obtaining a windfall.

#### c. Indemnification

Another theory of recovery against a design consultant is indemnity under an indemnification clause in the design agreement. The clause is triggered by the design consultant's negligence when it causes harm to third persons, resulting in damage claims against the project owner. The owner's ability to recover may be limited, however, by an anti-indemnification statute, or by a limitation of liability clause in the design agreement. The owner's ability clause in the design agreement.

## 10. Indemnity and Insurance Requirements

#### a. Indemnity

Most owners employ indemnity provisions in their construction contracts. Such provisions protect the owner by requiring the contractor to indemnify the owner against all claims arising from the performance of the contract. An example of a general indemnity clause is the standard provision used by the Maryland

 $<sup>^{153}</sup>$  Smith v. Cassadago Valley Cent. Sch. Dist., 578 N.Y.S.2d 747 (N.Y. A.D. 1991).

State Department of Transportation in its construction contracts. <sup>154</sup>

To the fullest extent permitted by law, contractor shall indemnify, defend and hold harmless the State, its officials and employees from all claims arising out of, or resulting from performance of the contract. Claim as used in this specification means any financial loss, claim, suit, action, damage, or expense, including but not limited to attorney's fees, bodily injury, death, sickness or disease or destruction of tangible property including loss of use resulting therefrom. The contractor's obligation to indemnify, defend and hold harmless includes any claim by contractor's agents, employees, representatives or any subcontractor or its employees.

An indemnity clause may require the indemnitor to indemnify the indemnitee against damages that are caused by the indemnitee's negligence. As a general rule, such clauses are enforceable where the clause clearly provides that the indemnitee is to be indemnified, notwithstanding the indemnitee's negligence. Some states, however, have enacted anti-indemnification statutes, which prohibit the use of such clauses in construction contracts. The following is an example of this type of statute: 157

A covenant, promise, agreement or understanding in, or in connection with or collateral to a contract or agreement relative to the construction, alteration, repair or maintenance of a building, structure, ...purporting to indemnify or hold harmless the promisee against liability for damage arising out of bodily injury to persons or damage to property contributed to, caused by or resulting from the negligence of the promisee, his agents or employees, or indemnitee, whether such negligence be in whole or in part, is against public policy and is void and unenforceable....

Another limitation on indemnification is a liability limitation clause in the contract. This type of clause imposes a ceiling on the indemnitor's liability. Typically, the clause will limit liability to a fixed dollar amount specified in the clause.  $^{158}$ 

Generally, such clauses are enforceable.<sup>159</sup> However, their enforceability may be affected by an anti-indemnification clause. In *City of Dillingham v. CH2M Hill Northwest, Inc.*, <sup>160</sup> the court held that a limitation of liability clause in an engineering services agreement was invalid under the Alaska anti-indemnification statute, <sup>161</sup> because the statute prevented the indemnitor from limiting its liability for its negligent acts.

In Valhal Corp. v. Sullivan Associates, <sup>162</sup> the court distinguished indemnification and limitation of liability clauses. The court said that an indemnity clause immunizes a party from its own negligence and therefore is void under an anti-indemnification clause. A limitation of liability clause, however, is not invalid. The clause did not purport to immunize a party from its own negligence; it only capped the amount of the indemnitor's liability.

#### b. Insurance

Owners usually specify in the construction contract the types of insurance that the contractor must procure for the project. The most commonly required type is liability insurance, protecting the insured against liability for third-party claims that result from construction activities. The contract may also require the contractor to obtain builder's risk insurance, protecting the insured against damage to the improvement during the course of construction. The contractor of the improvement during the course of construction.

<sup>&</sup>lt;sup>154</sup> General Provision 7-13. The owner may also be entitled to common-law indemnification when the owner is exposed to liability due to the contractor's negligence or breach of contract. Margolin v. N.Y. Life Ins. Co., 297 N.E.2d 80, 82 (N.Y. 1973). Inclusion of an indemnity provision in the construction contract does not alter the common law right to indemnity. Hawthorne v. South Bronx Community Corp., 582 N.E.2d 586 (N.Y. 1991). But the common law duty to indemnify may be limited by the terms of the express indemnity clause. Regional Steel Corp. v. Superior Court, 32 Cal. Rptr. 2d 417 (Cal. App. 1994).

<sup>&</sup>lt;sup>155</sup> Cunningham v. Goettl Air Conditioning, Inc., 980 P.2d 489 (Ariz. 1999). See generally WILLIAM L. PROSSER, LAW OF TORTS § 46, at 249–54 (2d ed. 1955).

<sup>&</sup>lt;sup>156</sup> For example, the following states have enacted anti-indemnification statutes: Alaska (STAT. 45.45.900); Arizona (Rev. STAT. 34-226(A)); California (CIV. CODE § 1782); Georgia (CODE 20-50A); Illinois (Rev. STAT. ch. 29, § 61); New York (GEN. OBLIG. LAW 5-322.1); Washington (Rev. CODE § 4.24.115).

<sup>&</sup>lt;sup>157</sup> N.Y. GEN. OBLIG. LAW § 5-322.1. See Sheehan v. Fordham Univ., 687 N.Y.S.2d 22 (N.Y. A.D. 1999) (statute precluded contractual indemnification for indemnitee's negligence).

D.W. HARP, INDEMNIFICATION AND INSURANCE REQUIREMENTS FOR DESIGN CONSULTANTS AND CONTRACTORS ON HIGHWAY PROJECTS (National Cooperative Highway Research Program Legal Research Digest No. 37, 1996.) Supplement to Vol. 3, Selected Studies in Highway Law. While state transportation agencies require these construction contractors to obtain liability insurance, not all of them require their design consultants to obtain professional errors and omissions (E&O) coverage. *Id*.

<sup>&</sup>lt;sup>164</sup> Annotation, Builder's Coverage Under Builder's Risk Insurance Policy, 97 A.L.R. 3d 1270 (1980).

i. Liability Insurance.—The contract specifications typically specify the type or types of liability insurance that the contractor is required to procure and the limits of coverage. The two most common forms of such insurance are commercial general liability (CGL) insurance and owners and contractors protective insurance, in which the owner is the insured. Both forms of insurance are based on occurrence coverage. Under occurrence coverage, a claim is covered if the event causing the damage or injury occurred during the period that the policy was in force.

[S]tandard comprehensive or commercial general liability [CGL] insurance policies provide that the insurer has a duty to indemnify the insured for those sums that the insured becomes legally obligated to pay as damages for a covered claim. Such a policy is triggered if the specified harm is caused by an included occurrence, so long as at least some such harm results within the policy period. <sup>188</sup>

The specifications requiring insurance may require that the owner be named as an additional insured on the contractor's CGL policy. <sup>169</sup> The specification may also require that in addition to the agency, the agency's officers and employees must also be named as additional insureds. <sup>170</sup> The specifications typically specify the minimum limits of coverage for each occurrence, and in the aggregate for each year that the policy is in force. <sup>171</sup> The limits for owners and contractors protective insurance are usually the same as the limits specified for CGL coverage. <sup>172</sup> The specifications may require the contractor to obtain liability insurance on standard

forms published by the Insurance Services Office (ISO), a national organization that provides services to the insurance industry.  $^{173}$ 

Disputes between the insured and insurer over coverage may lead to litigation. Whether the policy covers a particular occurrence is a question of contract interpretation. An insurance policy is treated in the same way as contracts are treated generally. The court's goal in interpreting the policy is to ascertain the intent of the parties. If that intent cannot be determined, and the policy is ambiguous, the policy will be construed against the insurer and in favor of coverage for the insured. The insured of the

ii. Builder's Risk Insurance.—This form of insurance provides coverage for damage to the improvements during the course of construction. Coverage may be limited by specific exclusions in the policy. The But an exclusion will not prevent coverage when it conflicts with other provisions of the policy granting coverage. When provisions of an insurance policy conflict, they are to be construed against the insurer and in favor of the insured."

iii. Failure to Obtain Insurance.—The contractor's failure to obtain insurance, as required by the contract, is a breach, entitling the owner to damages. <sup>179</sup> A contractor cannot avoid a contractual insurance requirement by arguing that a specification requiring insurance should be construed as an indemnification clause and, therefore, unenforceable under an anti-indemnification statute. The specification is an insurance requirement, not an indemnification provision. <sup>180</sup>

The owner's failure to obtain proof of liability insurance before notifying the contractor to proceed with the work does not waive the insurance requirement. 181

Arizona DOT Standard Specification 1-07.14 (2000); California DOT Standard Specification 7-1-12 B (1999); Colorado DOT Standard Specification 1-07.15 (1999); Florida DOT Standard Specification 7.13.2 (2000); Washington State DOT Standard Specification 1-07.18 (2000).

<sup>&</sup>lt;sup>166</sup> Colorado (Standard Specification 1-07-15) and Washington (Standard Specification 1.07.18) are examples of state's requiring OCP coverage in addition to CGL coverage.

#### c. Tendering the Claim

When an owner receives a claim, several questions should be asked: Is the claim covered by insurance? Is the claim covered by an indemnification provision in the contract? If the answer to the first question is, "yes," the claim should be tendered promptly to the insurer. If the answer to the second question is also, "yes," the claim should be tendered promptly to the contractor.

Tender of the claim to the design consultant may raise special considerations. Should the owner sue the designer in the same action brought by the contractor against the owner? Pursuing the claim in one action avoids the cost of multiple litigation and may avoid inconsistent results by a court, jury, or arbitrator, although joining the designer in the same action brought by the contractor does not guarantee a consistent result. This can occur because different standards of liability may apply. The contractor will sue the owner for breach of contract or an equitable adjustment under a specific clause in the contract. The owner will usually sue the designer for indemnification based on the designer's negligence.

In addition to avoiding multiple litigation, there is also another advantage in bringing the claim against the designer in the same action brought by the contractor against the owner. By bringing the claim in the same action, it allows the owner to point the finger at the designer, as the party ultimately responsible for the damage, and to a large extent "piggyback" the contractor's case. A major disadvantage in pursuing all claims in the same action, however, is that it may force the designer to point the finger at the owner. The designer may claim that it recommended a time extension, a different design, or more soils investigation, but the owner refused. Another disadvantage is where the designer is also the construction manager, and the owner is an "absentee owner." In those situations, only the construction manager, on the owner's side, may have day-to-day knowledge about the project. The problem of whether recovery should be sought from design consultants for design errors occurred in a major rail link project in New York State.185

Typically, however, many states use design and/or construction inspection consultants to complement their own staff. This may result in a blending of responsibilities, an unclear scope of responsibility, or the procurement of various engineering consulting services that do not require complete designs. Construction inspection services are similarly procured.

A problem occurred in connection with the Oak-Point Link Rail Project in New York State. A major rail link to New York City was to be placed on a viaduct in a nearby river. The government agency gave the consultant the criteria on expected loads the viaduct would carry. The project was on a quick track, but the funds allocated were insufficient. The design consultant was told that the State would provide the soil samples, borings, and evaluations and was instructed to use as-built plans for existing structures in the immediate area to gain whatever information it deemed appropriate in connection with the design. The State instructed that the limited boring information and interpolations were to be used to determine where rock formations and other obstructions might reasonably be anticipated. As it turned out, the rock formations, in many instances, deviated from the information obtained from the plans. The State subsequently ordered additional site boring and worked closely with the consultants to identify a solution.

Because of the overlapping agency staff and consultant activity and the lack of clear engineering responsibility placed solely on the consultants, the agency officials were not able to decisively determine who was responsible for the errors and failures when the project was terminated. The State paid the contractor several million dollars for extra work and delay damages after determining that no recovery should be sought from the consultant because of the instructions from the agency staff and the fusion of engineering functions. <sup>184</sup>

An owner may choose to defer action against the designer until the action against the owner is resolved. One method of accomplishing this is through the use of a "stand-still" agreement. A stand-still agreement typically provides that the owner will not initiate any action against the designer that is related to the claim brought by the contractor during the effective period of the agreement. The agreement usually provides that the parties agree to toll any applicable statutes of limitations that might otherwise be interposed.

Another potential limitation on the power of the owner to resolve its claims in one proceeding is where one prescribed dispute resolution method is litigation and the other is arbitration. This problem also exists where the contract or the design agreement does not authorize joinder of another party. All jurisdictions view arbitration as purely consensual. Thus, an owner cannot join the designer in an arbitration between the owner and the contractor unless the designer agrees. 187

 $<sup>^{^{182}}</sup>$  An error in a plan or specification may be a breach of the construction contract, but the design consultant is not necessarily liable to the owner if the error was not caused by the designer's negligence. See subpart 7.9.A., supra.

<sup>&</sup>lt;sup>183</sup> HARP, supra note 123.

 $<sup>^{184}</sup>$  Id. at 7.

 $<sup>^{\</sup>rm 185}$  The agreement reserves, until a later time, the owner's rights against the designer and the designer's defenses against the owner.

<sup>186</sup> The effective period of the agreement commences upon its execution and ends upon a final resolution of the contractor's claim against the owner. This may occur upon a final judgment, arbitration award, or final settlement of all of the contractor's claims for which the owner may seek indemnification from the designer.

 $<sup>^{\</sup>mbox{\tiny 187}}$  The consensual nature of arbitration is discussed in the next subsection.

#### B. ALTERNATIVES TO LITIGATION—ADR

#### 1. The Alternative Dispute Resolution Process

An early resolution of a construction dispute is usually in the best interests of both the owner and the contractor. The adage, "Agree for the law is costly," has particular significance in heavy construction, one of the country's most adversarial and litigious industries. As single dispute early in the project, if left unresolved, may escalate into a claim that ultimately leads to litigation. 190

Because most construction disputes involve money, they are often viewed in purely economic terms. Viewed as a business judgment, it is often better to settle and avoid the costs and risks of litigation. An owner may, however, choose litigation rather than settle to uphold some principle, or to establish a judicial precedent. In the absence of these kinds of consideration, owners often choose to settle rather than litigate the dispute. Over the past decade, the construction industry has developed a variety of nondispute resolution methods, which can be used to facilitate settlement. These methods, which include mediation, mini-trials, and Dispute Review Boards (DRBs), have proven to be useful. 191 Their success has tended to overcome the general resistance to bringing a third-party facilitator into the negotiation process or to referring the dispute to a neutral third-party for a nonbinding, advisory decision.

There is no single form that nonbinding ADR methods must follow. The method may be predetermined by the contract, <sup>192</sup> or one ADR method may be combined with another. Combining mediation and arbitration into one process is an example. <sup>193</sup> Since nonbinding ADR is voluntary, the parties may develop various hybrids to suit their needs. <sup>194</sup> When and how non-binding

 $^{\rm 191}$  Id. About 85 percent of those who mediate their disputes settle. See Douglas E. Knoll, A Theory of Mediation, 56 DISP. RESOL. J. 16, 18, 26 (2001); John D. Coffee, Dispute Review Boards, 43 Arb. J. 58 (1988).

ADR is used is up to the parties. But whatever method is agreed upon, it should represent a good faith effort by the parties to try and settle their dispute, and not used as a means of obtaining "free" discovery.

This subsection discusses the more commonly used methods of ADR such as mediation, mini-trials, and DRBs. Arbitration is also discussed as an alternative to litigation. The subsection concludes with an overview of the Partnering process as part of a dispute resolution system designed to minimize and even prevent claims. <sup>195</sup>

## 2. Nonbinding ADR

#### a. Mediation

Mediation is a form of structured negotiations in which the parties seek to settle their disputes with the assistance of an impartial facilitator. It is an informal non-adversarial process. In mediation, decision-making authority rests with the parties. The role of the mediator is to assist the parties in identifying issues, evaluating each party's respective positions, <sup>196</sup> and exploring settlement alternatives. <sup>197</sup>

The mediation process may be contractually required as a condition precedent to engaging in litigation or arbitration. In the absence of a contract provision requiring mediation, the contract may encourage, but not compel mediation. 198

Mediation, as a form of structured negotiations, was often used when the parties—because of personality conflicts or hard feelings-were unable to resolve their disputes through face to face negotiations. Instead of attempting to negotiate directly with each other, the parties retained a neutral third person to conduct the negotiations, usually a skilled negotiator who had a construction law background. The process was usually quick, several days at most, and relatively inexpensive. 199 In the 1980s, mediation became popular as a way of resolving construction disputes. Studies have shown that mediation usually works. About 80 percent to 85 percent of the cases submitted to mediation settle.200 These successes have led to the adoption of standard contract provisions providing for mediation. For example, the Arizona Department of Transportation

bridge refurbishment project). The Oregon DOT used voluntary mediation to resolve a \$4 million claim. (FHWA Report, TS-84-2098 (1993)).

<sup>&</sup>lt;sup>188</sup> LEGAL BRIEFS 148 (McMillian – U.S.A. 1995).

<sup>&</sup>lt;sup>189</sup> James P. Groton, Alternative Dispute Resolution in the Construction Industry, 52 DISP. RESOL. J. 48 (1997).

 $<sup>^{190}</sup>$  Id.

<sup>192</sup> The American Arbitration Association (AAA) Mediation Rules suggest that, as to disputes, the construction contract should require mediation before resorting to litigation or arbitration. The Associated General Contractors of America (AGC) form 600, article 14.3, makes mediation optional. The sample DRB contract provision makes submittal of the dispute to the DRB a condition precedent to litigation; see Paragraph C.1 of Appendix A, p. 276, AMERICAN ARBITRATION ASSOCIATION, ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES (Kendall/Hunt Publishing Co. 1994) (hereinafter "Practical Guide").

 $<sup>^{\</sup>mbox{\tiny 190}}$  See AMERICAN ARBITRATION ASSOCIATION, supra note 192, at 217-23.

<sup>&</sup>lt;sup>194</sup> For one large construction claim, the parties agreed to combine mediation with a mini-trial format (I-90 floating

<sup>198</sup> See Practical Guide, supra note 192.

 $<sup>^{\</sup>mbox{\tiny 199}}$  Usually the mediator's fee is shared equally by the parties.

 $<sup>^{\</sup>tiny{200}}$  American Arbitration Association, supra note 192, at 72.

has a standard specification that provides that the contractor may request the engineer to arrange for a mutually acceptable mediator, with the cost for the mediator's services to be shared equally by the state and the contractor. <sup>201</sup>

i. The Mediation Process.—The mediation process is simple and straightforward. The parties agree on a mediator or a process for selecting a mediator through an association such as the American Arbitration Association. The parties sign a mediation agreement, which they draft or which is furnished to them by the mediator, and then they mediate.<sup>202</sup>

Typically, the mediation process begins with a joint session between the parties presided over by the mediator. The mediator may share any preliminary thoughts he or she may have with the parties and outline the procedure that will be followed. Following the mediator's remarks, the parties have an opportunity to make opening statements in which each party presents its case to the mediator. The parties then split up and go to separate rooms for the private sessions, or caucuses.<sup>203</sup>

In the private sessions, the mediator meets privately with each party. The mediator seeks to elicit compromises from a party that may lead to settlement. The critical ground rule, in these sessions, is that the discussions are confidential and cannot be revealed to the opposing party unless the party making the statement authorizes its disclosure. The mediator engages in what is commonly called "shuttle-negotiations," going back and forth between the parties communicating offers of settlement that a party has authorized. This process continues until a settlement is reached, or it becomes apparent the negotiations have reached an impasse and further mediation would be a waste of time and money.<sup>204</sup>

*ii.* Selecting the Mediator.—The selection of a skilled and forceful negotiator is essential. The mediator is not just a messenger communicating offers made by the parties. An experienced mediator may play the role of a devil's advocate, often questioning and even challenging a party position to show that its position is not as strong as the party may believe, or to show that the opposing party's position also has merit.<sup>205</sup>

How do you find a skilled mediator? One way is to ask other attorneys and owners who have engaged in mediation for recommendations. Other sources for recommendations are construction expert witnesses who have been involved in major construction litigation. Often, such experts will attend a mediation and develop a perspective on who to select and who to avoid. The American Arbitration Association and similar dispute resolution organizations are other sources for recommendations.<sup>206</sup>

iii. The Opening Statement.—There are two opportunities during mediation of persuading the opponent to settle. The first is the opening statement in the joint session. The second is the information provided to the mediator during the private sessions, which the mediator can use to persuade the opponent to settle.

The opening statement by each party should be persuasive and a thorough presentation of that party's position. The real purpose of the opening statement is to persuade the opposing party that your case is strong and that you are likely to prevail if the claim is litigated or arbitrated. The opening statement should not be designed solely to educate the mediator. This can be done, as necessary, in the private session. "The opening statement in mediation should not be directed toward the mediator, rather it should be directed toward the opposing party." 207

The opening statement is usually made by counsel, and may be augmented with presentations by key project personnel and expert witnesses, as appropriate. The presentation should be well organized, accurate, and thorough. It should be supported by pertinent documents, such as CPM schedules, correspondence, change orders, photographs, diary entries, and inspection reports. The use of PowerPoint slides and overhead projector transparencies should be considered. Blown-

up charts to depict key information and summarized arguments can be effective.  $^{209}$ 

Concerns about "free discovery" and educating the opposing party should not affect the thoroughness of the opening statement. First, if the claim doesn't settle and is tried or arbitrated, it is likely that the information will be obtained through discovery. Second, and more important, is the need to persuade the opposing party that it is in its interest to settle more on your terms than to stick with its initial position.

The opening statement should not be hostile or overbearing in tone. Instead, it should be civil and business like, focusing on the key points of the dispute. This type of presentation will help set the stage for the mediator in persuading the opposing party of the risks it faces if the case is tried, and the practical advantages it gains in settling the claim.

iv. Case Evaluation.—A party should make its own evaluation of the case and determine a reasonable settlement range, rather than relying on the mediator to establish a settlement range. However, a party's settlement position should not be overly rigid. A party should be willing to reevaluate its settlement position based on new information that could significantly affect the outcome of the case if it were litigated. In this regard, it is important to know the case and its strengths and weaknesses to properly evaluate the new information. <sup>210</sup>

If the new information cannot be evaluated properly without further investigation, then it may be better to adjourn the mediation until the information can be verified. Usually, this is a better course of action than being overly influenced by new information and settling too high if you are the defendant, or too low if you are the claimant.<sup>211</sup>

v. Candor with the Mediator.—Information provided to the mediator is confidential and cannot be used in subsequent proceedings, if the mediation fails. <sup>212</sup> Also, anything said to the mediator in the private session cannot be revealed to the opposing party, unless the party making the statement authorizes disclosure. <sup>213</sup> Since communications with the mediator are protected, a

party should be frank and cooperative in the private sessions and provide the mediator with an honest assessment of the claim. Creating this type of atmosphere will promote the negotiations and serve as a "reality check" to test the soundness of a party's position.

vi. The Mediation Agreement and Confidentiality.—The parties should enter into a mediation agreement establishing the ground rules for the mediation. The agreement should identify the dispute that will be mediated and the name of the mediator. The agreement should address certain "housekeeping" matters such as the mediator's fee and expenses, how they will be shared by the parties, and when and where the mediation will be held

The agreement may address the submission of position papers by the parties to the mediator, any limitations on their length, and whether the papers will be exchanged between the parties or submitted solely to the mediator in confidence. Usually the parties will exchange position papers. This is consistent with the notion that an important feature of mediation is for the parties to persuade each other of the merits of their respective positions.<sup>214</sup>

It is not necessary to outline in the agreement how the mediation will be conducted. Usually, this will be covered by the mediator in the joint session. The agreement should contain a clause granting immunity to the mediator from any liability for the mediator's participation in the mediation. The agreement should identify who will attend the mediation and identify the parties' representatives who have full settlement authority.

Perhaps the most important provision of a mediation agreement is the one dealing with the confidentiality of the proceedings. A public agency should consider including a clause in the agreement that allows the agency to disclose the terms of any settlement involving public funds or public issues. In *Register Div. of Freedom Newspapers, Inc. v. County of Orange*, the court held that documents relating to the settlement of a claim with public funds constitute public records that are subject to disclosure under the California Public

 $<sup>^{209}</sup>$  Preparing to Mediate, ch. 8, ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES, supra note 192, at 97.

<sup>&</sup>lt;sup>210</sup> Fisher, *supra* note 204.

<sup>&</sup>lt;sup>211</sup> See Groton, supra note 192, at 105–6. The authors suggest that postponing the mediation to investigate new issues is counterproductive. Instead, the party should keep the process moving by doing a quick investigation during a break or between sessions. As a practical matter, a party's choice to proceed or adjourn will be determined by the impact that the information has on the case, its reliability, and the time needed to verify its accuracy.

 $<sup>^{212}</sup>$  John W. Hinchley, Construction Industry: Building the Case for Mediation, 47 ARB. J. No. 2 (1992); Some states have enacted statutes that make mediation proceedings confidential. Some examples: Tex. Civ. Proc. & Rem. Code Ann. § 154.53(c); Neb. Stat. 25-2914;

Records  $Act.^{217}$  Other jurisdictions have reached a similar result.  $^{218}$ 

vii. Other Guidelines.— •A party should have one spokesman. Other party representatives should not speak unless called upon to do so by the spokesman. This guideline applies to both the joint and private sessions.

- After sufficient discovery is conducted to fill in any significant gaps in the case, the parties should consider a moratorium on discovery. This saves the cost of discovery and allows the parties to concentrate on preparing for the mediation, instead of being distracted by ongoing discovery, particularly depositions. This guideline applies where a lawsuit has been filed or a demand for arbitration has been made.
- When mediation is voluntary (not mandated by the contract), the owner should not agree to mediation until the owner is satisfied that it has sufficient information concerning the claim to be able to evaluate settlement positions during the mediation process.
- Once a settlement is reached, the principal terms of the settlement should be put in writing and signed by the parties. Counsel should prepare an outline of the important settlement terms in advance and bring them to the mediation.

viii. Advantages and Disadvantages.—Mediation has certain advantages in addition to creating an opportunity for the parties to engage in meaningful negotiations that may resolve their dispute. Mediation allows the parties to "test the waters" by having the mediator explore settlement possibilities with the opposing party. It allows the negotiations to be conducted by a skilled and impartial negotiator. The obvious drawback is the expense invested in the process, and to some extent "free discovery." In addition, a settlement may be too high or too low, because a party was overly influenced by the mediator to settle. However, the better a party understands the case, the better it will be able to evaluate the case and make an informed decision on whether to settle or proceed to litigation or arbitration.

ix. Authority To Mediate.—Do public agencies need statutory authority to engage in mediation? Generally, the power to contract, and to sue and be sued, carries with it the implied power to settle disputes arising out of the contract. This should include mediation since it is simply a form of structured negotiations.

x. Mandatory Mediation.—Should mediation be contractually required as a condition precedent to arbitration or litigation, or should mediation be purely voluntary? Those who favor mandatory mediation argue that even if the mediation fails, the mediation process forces the parties to test their positions before a neutral mediator. which may lead to a settlement. 220 There are those, however, who believe that mediation should be voluntary.221 If a party is not willing to compromise its position, it is unlikely that the claim can be settled. Why should a party who is unwilling to compromise be required to go through a process that, as a practical matter, will be meaningless? In rebuttal, some argue that mediation should be required by the contract because it creates an opportunity for settlement, and that is sufficient reason to require mediation as a condition of the contract.222 But there is an old proverb that "you can lead a horse to water, but can't make it drink." The same is often true for a party who is unwilling to negotiate or compromise its position. The party can be forced to attend the mediation—to satisfy the condition precedent so that it can bring suit or demand arbitration—but it cannot be forced to negotiate.

 $<sup>^{222}</sup>$  The AAA recommends mandatory mediation in its Mediation Rules, note 192 supra.

#### b. The Mini-Trial

i. The Mini-Trial Process.—A mini-trial is a form of structured negotiations in which each party makes a summary or abbreviated presentation of its position to a panel composed of the parties' principals, who have authority to settle the claim. The parties' positions may be presented by witnesses, usually in narrative form. Cross-examination is limited, or not permitted, as determined by the parties. The hearing is confidential; nothing said can be used by the parties in subsequent proceedings. The hearing is adversarial; each party presents its best case. However, the presentations nevertheless should be civil in tone. After the mini-trial is concluded, the principles will try to negotiate a settlement. The process may be facilitated by a neutral who, serving as the moderator, keeps the process on track and running smoothly. The facilitator can also serve as a mediator when the principals try to negotiate a settlement of the claim. 223

*ii. History.*—The U.S. Army Corps of Engineers has led the way among federal agencies in the use of minitrials. The use of minitrials as a voluntary method of resolving contract disputes received further encouragement with the enactment of the Disputes Resolution Act.<sup>224</sup> The minitrial process has been used successfully to settle large construction claims.<sup>225</sup>

iii. Mini-Trial Agreement.—The mini-trial agreement should set the ground rules on how the mini-trial will be conducted and contain a clause making the proceedings confidential. The agreement should identify the principals who will hear the presentations and the neutral who will serve as the facilitator. The agreement should contain a schedule of the proceedings and how the time for the presentations will be allocated between the parties. It should also address the immunity of the facilitator and the sharing of his or her fees by the parties. <sup>226</sup>

#### c. Dispute Review Boards

i. Purpose.—A Dispute Review Board (DRB) is a nonbinding ADR method that is established by the owner and the contractor to decide construction disputes that arise during the course of the project. 228 The function of a DRB is to provide recommendations as to how a dispute should be resolved. The owner and the contractor can then use the recommendation in their settlement negotiations.<sup>229</sup> However, unlike other forms of nonbinding ADR, the recommendations are not confidential. 230 Moreover, the DRB Specifications provide that, "...the written recommendations, including any minority reports will be admissible as evidence in any subsequent litigation."231 Generally, a DRB serves as an ad hoc method of resolving disputes; disputes that if not resolved could fester and eventually lead to litigation or arbitration.

iv. Advantages and Disadvantages.—The primary advantage of the mini-trial is that it provides an opportunity for the parties to explore the strengths and weaknesses of their respective positions in a structured, confidential setting designed for settlement purposes. Its disadvantages are the time and expense invested in the process. Also, a mini-trial is not suitable if the outcome of the dispute turns mainly on the application of some legal precedent or legal principal.<sup>227</sup>

<sup>&</sup>lt;sup>223</sup> Lester Edleman & Frank Carr, *The Mini-Trial: An Alternative Dispute Resolution Procedure*, 42 ARB. J., No. 1, at 7 (1987); GROTON, *supra* note 192, at 233–43.

 $<sup>^{\</sup>tiny 224}$  5 U.S.C. § 581, et seq.

<sup>&</sup>lt;sup>225</sup> See the discussion of cases in which mini-trials were used successfully in Douglas H. Yarn, Mini-Trial, in ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES 233–34. Several states have had success in using mini-trials to resolve construction claims. For example, the Pennsylvania Department of Transportation achieved settlement of a major construction claim on the Schoylkill Expressway (\$38.4 million claim settled for \$7.5 million), State Laws and Regulations Governing Settlement of Highway Construction Contract Claims and Claim Disputes (No. FHWA-TS-84-209 (1993)).

 $<sup>^{\</sup>rm 226}$  See Pub. Cont. L.J. No. 3 71–75 (1995) for a sample mini-trial agreement.

<sup>&</sup>lt;sup>227</sup> See Yarn, supra note 225, at 234–36.

<sup>&</sup>lt;sup>228</sup> A sample DRB specification is shown in Appendix A to Chapter 20, *Dispute Review Boards*, GROTON, *supra* note 192, at 274–80. A sample DRB three-party agreement is shown in Appendix B, at 281–94. A sample DRB guideline is shown in Appendix C, at 295–97.

<sup>&</sup>lt;sup>229</sup> John D. Coffee, *Dispute Review Boards*, 43 ARB. J. No. 4, at 58 (1988); *Avoiding and Resolving Disputes During Construction*, The Technical Committee on Contracting Practices of the Underground Technology Research Council (1991).

<sup>&</sup>lt;sup>230</sup> Supra note 198.

 $<sup>^{231}</sup>$  See sample specification, Section B11 at p. 276, Appendix A, note 228 supra, and American Society of Civil Engineers Model Specification at 338–44.

ii. DRB Membership.—The composition of a DRB is specified in the contract documents. Typically, a DRB is composed of three members:<sup>232</sup> one member selected by the owner and approved by the contractor, one member selected by the contractor and approved by the owner, and a third member selected by the other two board members who also must be approved by the owner and the contractor. The member usually serves as the chairperson.<sup>233</sup> The contract specifications also require that all DRB members must be experienced with the type of construction involved in the project.<sup>234</sup> The specification may provide that in the event of an impasse in the selection of a third member, either the owner or contractor or both may appeal to a designated court, requesting the court to select a third member from a list or lists submitted to the court by the owner and/or the contractor.235 Replacement members are to be appointed in the same manner as the original members were appointed.<sup>236</sup> After the DRB members are selected, the owner, the contractor, and the DRB members must sign a three-party agreement, which governs the operations of the DRB. 237

iii. DRB Operations.—The function of the DRB is spelled out in the contract. The DRB is an advisory body assisting the parties in the resolution of contract disputes. <sup>238</sup> The DRB provides written recommendations to the owner and the contractor. These recommendations, while advisory and nonbinding, are admissible as evidence in subsequent litigation or arbitration proceedings. <sup>239</sup>

Generally, the DRB procedure is similar to arbitration, although the DRB's recommendations are advisory and not binding. The party that has the dispute goes first, followed by the other party. Each party is permitted to rebut what the other has said until all aspects of the dispute are thoroughly covered. Each party may call witnesses. Presentations are made narratively, and the witnesses may use exhibits to support or to illustrate their testimony. There is no cross-examination by the opposing party, but the DRB members may ask questions. A refusal by a party to provide information requested by the DRB may be considered by it in making its findings and recommendations.<sup>240</sup>

After the hearing is concluded, the DRB meets in private to discuss and decide the dispute. Its findings and recommendations are then submitted as a written report, including a minority report, if a member dissents, to both parties. Either party may request the DRB to reconsider its recommendation based on new evidence.<sup>241</sup>

If a party refuses to attend a DRB hearing, the party requesting the hearing may seek a court order to compel the recalcitrant party's attendance.<sup>242</sup>

iv. Ethical Considerations.—Because the DRB's recommendations are not binding and may be rejected by the owner or the contractor, it is essential that both parties have confidence in the DRB process and in each of its members. <sup>243</sup> If either party loses confidence in the DRB, a party is unlikely to give weight to an unfavorable recommendation, making the DRB process ineffective. <sup>244</sup>

<sup>&</sup>lt;sup>232</sup> A DRB could consist of one member to reduce costs, or as many as five members, as was done on the English Channel Tunnel Project. It is important to have an odd number of members to ensure a majority decision and avoid a tie, which could happen with an even numbered panel if there was a split decision.

 $<sup>^{233}</sup>$  Sample DRB specification, Section E, "DRB Members," Appendix A, supra note 228, at 277.

 $<sup>^{234}</sup>$  Id. The goal in selecting the third member is to complement the experience of the other two members. "Dispute Review Board Three Party Agreement," Section II.A, Appendix B, supra note 228, at 282.

<sup>&</sup>lt;sup>236</sup> Id.; Appendix B, Section F, at 283.

 $<sup>^{237}</sup>$  Appendix B, supra note 228.

 $<sup>^{\</sup>tiny{238}}$  Appendix A, Section D, supra note 228.

<sup>&</sup>lt;sup>239</sup> Appendix A, Section B.11, *supra* note 228. There is not unanimity as to whether the DRB's recommendations should be admissible in evidence in subsequent dispute resolution proceedings. Daniel D. McMillan, *An Owner's Guide to Avoiding the Pitfalls of Dispute Review Boards on Transportation Related Projects*, 27 TRANSP. L.J. 181, at 198–99 (Spring 2000) (Discussing why owners should consider deleting the provision concerning admissibility of DRB recommendations). The majority view, that the recommendation should be admissible, is based on the premise that the parties are more inclined to accept the DRB's recommendation when the contract provides that the recommendation will be admissible in any subsequent litigation or arbitration. "Alternative Dispute Resolution in the Construction Industry," *supra* note 189, at 53.

 $<sup>^{\</sup>rm 240}$  Appendix C, "Dispute Review DRB Guidelines," supra note 228, at 295.

 $<sup>^{241}</sup>$  Id.

 $<sup>^{242}</sup>$  "An Owner's Guide to Avoiding the Pitfalls of Dispute Review Boards on Transportation Related Projects," supra note 239, at 200. The article also discusses the pros and cons of proceeding with a DRB hearing in the absence of one of the parties.

<sup>&</sup>lt;sup>243</sup> The requirement in the contract that each party must approve the other's member, and the third member selected by the two members, is designed to establish neutrality and make the DRB function as an objective, impartial, and independent body. *See* CONSTRUCTION DISPUTE REVIEW BOARD MANUAL 27–30, 40 (McGraw Hill 1995).

<sup>&</sup>lt;sup>244</sup> L.A. County Metro. Transp. Auth. v. Shea-Kiewit-Kenny, 59 Cal. App. 4th 676, 69 Cal. Rptr. 2d 431 (1997) (DRB specification only allowed a DRB member to be terminated for cause. Owner terminated its member for cause when the member told the owner, during the second day of the hearing, that it should settle because it was going to lose. The court found that the owner had cause to terminate its member). Ex parte communications between DRB members and the owner or contractor are prohibited. The DRB members are specifically forbidden to give consulting advice to either party. Construction Dispute Review Board Manual, *supra* note 243

v. History and Popularity of the DRB Concept.—The DRB concept has gained popularity since its first reported use by the Colorado Department of Transportation for the construction of the Eisenhower Tunnel in 1975. Based on its success in Colorado, the use of DRBs was recommended by the Underground Technology Research Council. The concept spread and DRBs have been used numerous times on major, heavy construction projects, including the construction of the Central Artery/Tunnel in Boston.

DRBs owe their popularity to the fact that the DRB's recommendations have generally been accepted by the contracting parties.<sup>249</sup> While the DRB concept is popular, it should not be viewed as a panacea for all construction disputes, particularly large, complex claims<sup>250</sup> or claims that involve purely legal issues. 251 DRBs are well suited for the resolution of technical construction issues that invariably crop up during the course of the work. The fact remains, however, that the DRB concept has proven to be a useful tool in resolving construction disputes. Moreover, the establishment of a DRB tells potential bidders that the owner believes in trying to resolve disputes by engaging neutrals, who are experts in construction, to assist the parties in resolving their disputes. This could result in lower bids by reducing contingent amounts included in bids for anticipated legal costs in litigating construction claims.<sup>21</sup>

#### d. Hybrid ADR

While mediation and mini-trials are the more common ADR methods, the parties are free to create other ways of resolving their contract disputes. Mediation combined with arbitration (Med-ARB) is an example. <sup>253</sup> Under this hybrid, the parties mediate the dispute and if the dispute is not resolved, it is referred to arbitra-

tion for a binding resolution. The person who served as the mediator may or may not serve as the arbitration.  $^{254}$ 

Mediation can be combined with a mini-trial format in which presentations are made by witnesses to the mediator in a joint session. The mediator can use the information obtained during the mini-trial to provide each party, in the private sessions, with a confidential assessment of the claim and the probable outcome if the parties proceed to litigation or arbitration. A variation of this method is fact-based mediation. In this method, the mediator, after making a thorough investigation of the claim, issues a detailed, confidential report to each party stating a recommended settlement figure and the factual basis for the recommendation. The parties can then use the report for further negotiations. 256

In short, there is no single format that ADR must follow. Since ADR is consensual, the parties are free to create any process that suits their needs in resolving construction disputes.<sup>257</sup>

#### 3. Arbitration of Construction Claims

#### a. Overview

Arbitration has become the most widely used method of resolving construction disputes between private contracting parties. <sup>258</sup> Most states have enacted arbitration statutes modeled after the Uniform Arbitration Act adopted by the National Conference of Commissioners on Uniform State Laws. <sup>259</sup> The Federal Arbitration Act (FAA) authorizes enforcement of arbitration agreements that affect Interstate commerce. <sup>260</sup> However, arbitration is not authorized for dispute resolution when

<sup>&</sup>lt;sup>245</sup> Keith W. Hunter & Jim Hoening, Dispute Resolution and Avoidance Techniques in the Construction Industry, 47 ARB. J. No. 3, at 16, 17 (1992).

<sup>&</sup>lt;sup>246</sup> *Id*. See also Coffee, *supra* note 229.

<sup>&</sup>lt;sup>247</sup> Avoiding and Resolving Disputes During Construction, supra note 229.

 $<sup>^{\</sup>scriptscriptstyle 248}$  Construction Dispute Review Board Manual, supra note 24343.

<sup>&</sup>lt;sup>249</sup> Groton, supra note 189.

<sup>&</sup>lt;sup>250</sup> Very large, complex claims may require analysis by construction experts, extensive discovery, and a financial audit. The DRB process may not be the best way to resolve large, end-of-project, omnibus claims.

<sup>&</sup>lt;sup>251</sup> Ordinarily, lawyers are not permitted to serve as DRB members for fear that it might make the process too adversarial. See Kathleen N. J. Harmon, The Role of Attorneys and Dispute Review Boards, ADR CURRENTS (March-May 2002) (published by the American Arbitration Association).

 $<sup>^{\</sup>mbox{\tiny 252}}$  ADR, A Practical Guide to Resolve Construction Disputes, supra note 192, at 272.

 $<sup>^{254}</sup>$  Id. Serving as both the mediator and arbitrator could affect the parties' willingness to make compromises and be candid with the mediator.

<sup>&</sup>lt;sup>255</sup> Supra note 194.

 $<sup>^{256}</sup>$  ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES, supra note 192, " Considering Fact-Based Mediation," at 96.

<sup>&</sup>lt;sup>257</sup> While research has not disclosed any laws that mandate a particular form of non-binding ADR that state transportation agencies must follow, a few states require arbitration as the sole remedy for the final resolution of a public works contract dispute, if the parties cannot settle the dispute through negotiations. See generally table in Section 6.3.B.

 $<sup>^{258}</sup>$  ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES, supra note 192, at 71.

<sup>&</sup>lt;sup>259</sup> See, e.g.,; CONN. GEN. STAT. 52-412; GA. CODE ANN. 9-9-9; HAW. REV. STAT. 658-76; TEX. ANN. CIV. STAT. art. 224; UTAH CODE ANN. 78-31A; Washington, WASH. REV. CODE ch. 7.04.

<sup>&</sup>lt;sup>260</sup> 9 U.S.C. § 2. The meaning of "interstate commerce" as used in the Act is broadly construed, In re Gardner Zemke Co., 978 S.W.2d 624 (Tex. App. 1998); St. Lawrence Explosives Corp. v. Worthy Bros. Pipeline Co., 916 F. Supp. 187 (N.D.N.Y. 1996); see also Indemnity Ins. Co. of N.A. v. ABA Power, 925 F. Supp 705 (S.D.N.Y. 1996) (preemption of state law when the arbitration agreement specified that state law will apply).

the Federal Government is one of the disputing parties. Contract disputes involving the Federal Government are resolved in accordance with the procedures specified in the Contract Disputes Act. <sup>261</sup>

Arbitration is generally favored by the courts as an expeditious means of resolving contract disputes. This was not true under the common law. The common law viewed arbitration as an improper attempt to deprive or oust the courts of jurisdiction to hear contract disputes. This view is now generally obsolete. With the enactment of statutes providing for judicial enforcement of arbitration agreements and a change in judicial attitude, arbitration agreements are entitled to be enforced on the same terms as any other contractual undertaking. The same terms as any other contractual undertaking.

#### b. The Arbitration Process

Litigation and arbitration are governed by rules. Litigation is conducted in accordance with the civil rules of procedure and the rules of evidence in effect in the jurisdiction where the case is filed. Arbitration, although less formal, is governed by the rules specified in the arbitration clause, normally the Construction Industry Arbitration Rules of the American Arbitration Association. These rules, which were revised in 1996, create three classes of claims: (1) fast track (claims less than \$50,000); (2) regular track (claims \$50,000 to \$1 million); and (3) large, complex case track (claims over \$1 million). The new rules are designed to speed up and streamline the arbitration process.

While arbitration is not as formal as a trial, it would be a mistake to approach arbitration as some sort of "fact-finding" process, where each party tells its story and then leaves it up to the arbitrator or arbitrators to sort out the truth and reach a fair result. It would also be a mistake to regard arbitration as a Solomonic process in which the arbitrators invariably "split the baby." Instead, one should prepare for arbitration much like one would prepare for a trial. The key to successful arbitration, like successful litigation, is sound and thorough preparation. <sup>266</sup> In an arbitration proceeding, direct and cross-examination usually follow a question-and-

answer format.<sup>267</sup> The presentation to the panel, which is usually made by counsel, should be organized, interesting, and credible. The use of models, photographs, videos, and other demonstrative exhibits to illustrate the testimony help accomplish this goal. Affidavits should be used to establish routine facts that the opposing party is unwilling to stipulate to. Another technique is to use affidavits for direct testimony, leaving live testimony for cross-examination.<sup>268</sup> Although the rules of evidence do not apply in arbitration, objections to questions that are unfair or improper should be made. Objections should also be made to testimony that is clearly out-of-bounds.<sup>269</sup>

The use of summaries should be considered as a method of presenting voluminous information. The party offering a summary should give the opposing party the opportunity to review the underlying data on which the summary is based in advance of the hearing. Documents that will be used as exhibits should be prenumbered and, if possible, stipulated to in advance of the hearing. Bulky documents, such as the contract plans and specifications, should be available in the hearing room. Less bulky documents that have been agreed to, such as correspondence, change orders, excerpts from reports, diary entries, memoranda, and inspection reports should be placed in notebooks in numerical order, according to how they are prenumbered, for use by the arbitrators, the witnesses, and counsel. Each arbitrator should have his or her own notebook for use during the hearing.

Briefs should be submitted after the evidentiary hearing is closed.<sup>270</sup> Documents referred to in the brief should be identified by their number in the notebook. Arbitrators should not be forced to sift through a mass of documents in the notebooks to find some document referred to in the brief just by its description or title. Legal authority should be used wisely. Citing case after case is usually ineffective. It is better to cite a case that

 $<sup>^{^{261}}</sup>$  41 U.S.C. 601,  $et\ seq.\ See\ 16$  Pub. Cont. L.J. 66; 50 Yale L.J. 458.

<sup>&</sup>lt;sup>262</sup> Maross Constr., Inc. v. Central N.Y. Regional Transp. Auth., 488 N.E.2d 67 (N.Y. 1985).

<sup>&</sup>lt;sup>265</sup> The General Conditions of the Contract for Construction, American Architect Institute (AIA) Document A201, incorporates the Construction Industry Arbitration Rules of the AASAZ. The following state transportation agencies that employ arbitration use the AAA rules: Arizona, Connecticut, Delaware, Oregon, and Washington. See table Section 6.B.3.

 $<sup>^{266}</sup>$  "How to Win at Arbitration," ch. 12, ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES,  $supra\,$  note 192, at 157–75.

<sup>&</sup>lt;sup>267</sup> *Id.* See also "The Expert in ADR," *Id.*, at 303–05, suggesting a narrative form of expert testimony where it is necessary to explain technical issues to the panel. However, the panel's expertise should be kept in mind by the attorney and the expert in presenting expert testimony. Construction arbitration panels are usually knowledgeable about construction issues, project delays, and damages. *See also* James J. Meyers, *10 Techniques for Managing Arbitration Hearings*, 51 DISP. RESOL. J., No. 1., at 28 (Jan.—March 1996). The author discourages the use of expert witnesses except where an issue cannot be resolved without them, at p. 29.

 $<sup>^{268}</sup>$  10 Techniques for Managing Arbitration Hearings, Id., at 28.

<sup>&</sup>lt;sup>269</sup> "Handling Objections," ADR, A PRACTICAL GUIDE TO RESOLVE CONSTRUCTION DISPUTES, *supra* note 192, at 170–71.

<sup>&</sup>lt;sup>270</sup> In addition to a post-hearing brief, a pre-hearing brief containing a short, concise statement of the party's position is also helpful, and should be given to the arbitrators in advance of the hearing. The pre-hearing brief can be amplified by a brief opening statement, *Id.*, at 162–64 ("Opening Briefs and Statements"), 173 ("Closing Statements"), 174.

is a precedent than cite a string of cases from other jurisdictions. Copies of cases that are cited should be attached as an appendix to the brief. Important language in the case should be highlighted. The brief should explain why the law applies, how its application dictates the result that the party is seeking, and why that result is fair and furthers public policy. The brief should be written in clear, plain English; the use of legalese should be avoided. The brief should be accurate, persuasive, and supported by references to the record. In this sense, what persuades judges should also persuade arbitrators, although arbitrators, unlike judges, are not bound by legal precedent. In short, a good post-hearing brief should serve as a map that the arbitrators can use in reaching their decision.

Arbitration may be waived by failing to demand it within the time required by the contract, <sup>272</sup> by commencing litigation, <sup>273</sup> or by failing to plead the agreement to arbitrate as an affirmative defense in an answer to a complaint in a lawsuit. <sup>274</sup> Also, arbitration may be time-barred when the demand for arbitration is filed after the statute of limitations has expired. <sup>275</sup>

Generally, an arbitrator's decision on questions of fact or law is conclusive, <sup>276</sup> and can only be modified or vacated in accordance with the grounds specified in the state's arbitration act. <sup>277</sup> An arbitrator's decision may collaterally estop another party in a subsequent proceeding <sup>278</sup> or bar a later claim based on *res judicata*. <sup>279</sup>

A question may arise as to whether a dispute is subject to arbitration. Normally, this is a question for judicial determination. But if arbitrability is debatable, the clause generally will be construed in favor of arbitration. This view is consistent with that public policy favoring arbitration.

A party to an arbitration agreement cannot vitiate the arbitration hearing by refusing to attend. The arbitration may proceed in the absence of a party who, after notice of the hearing, fails to be present or fails to obtain a continuance from the arbitrator.<sup>283</sup>

#### c. State Transportation Agencies and Arbitration

i. Authority To Arbitrate.—Some state transportation agencies include arbitration clauses in their contracts. In Delaware and North Dakota, arbitration is the exclusive method for resolving contract disputes. In California, arbitration is required by statute, although the State and the contractor may agree, in writing, to waive arbitration and litigate the claim. In Connecticut, the contractor has the option of electing either arbitration or litigation. A few states use a mix of arbitration and litigation.

In the absence of express legislation authorizing arbitration as a means of resolving contract disputes, may a state contracting agency agree to arbitrate? Generally, the answer to this question is yes. A number of jurisdictions have held that the express statutory authority to contract, and to sue or be sued, waives sovereign immunity and includes, by implication, the implied power to agree to arbitration as a means of resolving contract disputes. For example, in *Dormitory Authority v. Span Electric Corp.*, <sup>289</sup> the New York Court of Appeals said: "... we hold that the state itself is not insulated against the operation of an arbitration clause because the power to contract implies the power to assent to the settlement of disputes by means of arbitration."

Other jurisdictions have followed the view expressed by the New Court of Appeals in cases where public agencies have attempted to avoid arbitration by contending that they lacked statutory authority to include arbitration clauses in their contracts.<sup>290</sup> Statutes that expressly authorize state contracting agencies to arbitrate contract disputes may be strictly construed. Only disputes of the kind specified in the statute are subject to arbitration. If there is a serious question as to whether the dispute is arbitrable, the statute will be construed against arbitration and in favor of the state's interpretation that the claim is not subject to arbitration under the statute. In *Department of Public Works v. Ecap Const. Co.*,<sup>291</sup> the Connecticut Supreme Court held that the public works arbitration statute did not apply to a claim that the state had breached a settlement agreement. The statute only applied to actual construction disputes. It would not be construed to cover a claim that an agreement settling a construction dispute had been breached by the State.

ii. Advantages and Disadvantages.—Contract disputes that remain unresolved often develop into a claim leading to litigation or arbitration. The forum selected to resolve the claim usually depends upon the final dispute resolution method specified in the contract or by a statute. Which forum is better for an owner—arbitration or litigation? Those who favor arbitration agree that arbitration is quicker, cheaper, and more efficient than litigation. Those who favor litigation argue that litigation has better safeguards because of the rules of evidence, the application of legal precedent, and broader appeal rights. There doesn't seem to be any absolute answer as to which forum is better. Each has its own advantages and disadvantages, as depicted in the following table. 293

<sup>&</sup>lt;sup>284</sup> 10 Del. C. § 5723 (1999) et seq.

<sup>&</sup>lt;sup>291</sup> Supra note 280. Statutes that waive sovereign immunity are strictly construed. This rule applies to statutes that authorize arbitration as a means of resolving public contract disputes.

 $<sup>^{\</sup>tiny 292}$  For example, the California State Contract Act specifies arbitration as the required dispute resolution method unless the state and the contractor agree to litigation, supra note 287.

<sup>&</sup>lt;sup>283</sup> See generally Judge Marjorie O. Rendell, ADR vs. Litigation, 55 DISP. RESOL. J., No. 1, at 69 (Feb. 2000); John A. Harding, Jr., Dealing With Mandatory ADR," 39 TRIAL LAW. GUIDE 38 (1995); 4 AM. Jur. 2D Alternative Dispute Resolution §§ 8 and 11 (1995).

 $\label{eq:TABLEB} \textbf{Arbitration and Litigation Comparisons by Features}$ 

Feature	Arbitration	Litigation	
Discovery	Restrictive	Liberal	
Motion Practice	Little if any.	Civil rules allow pre-trial motions to dismiss claims and limit evidence.	
Evidence	Rules of evidence do not govern admissibility.	Rules of evidence apply.	
Basis for decision	Leans toward fairness—Not bound by legal precedent, favors a party who has the "equities."	Governed by legal precedent, although jury may be influenced by what it believes to be fair.	
Complex engineering and technical issues	Arbitrators usually selected for their knowledge and technical expertise.	Decisionmaker—judge or jury—usually lacks technical expertise.	
Scheduling	More flexible and easier to schedule hearings, although this is not always true when three arbitrators are involved.	Less flexible and harder to schedule hearings because of court congestion.	
Expense and time required for hearing	Generally less expensive, and more expeditious; however, the cost and time to resolve large, complex omnibus claims involving a three-member arbitration panel may be more expensive and time consuming than a courtroom trial.	Generally takes longer and is more expensive than arbitration.	
Appeal from adverse decision	Limited—grounds for vacation of award are usually governed by statute.	Broader appeal rights based on substantial evidence and conformity to legal precedent.	

<sup>&</sup>lt;sup>294</sup> The California State Contract Act provides that a court must vacate the arbitration award if it is not supported by substantial evidence, or it is not decided in accordance with state law. Public Contract Code, art. 7.2, § 10240.12.

Generally, arbitration has been the forum of choice for resolving smaller claims. Several states have implemented this view. Arizona requires mandatory arbitration for claims not exceeding \$200,000.<sup>295</sup> Oregon requires mandatory arbitration for claims under \$25,000.<sup>296</sup> Washington requires mandatory arbitration for claims not exceeding \$250,000.<sup>297</sup> Each state specifies that the arbitration hearing will be conducted in accordance with the Construction Industry Arbitration Rules promulgated by the American Arbitration Association.<sup>298</sup>

#### d. Consolidation of Arbitration Proceedings

Ordinarily, courts will not compel consolidation of separate arbitration proceedings where the arbitration agreements do not contain provisions permitting consolidation. The rule is based on the rationale that arbitration is consensual and thus parties cannot be compelled to arbitrate matters that they did not agree to arbitrate. However, when a party signs a contract containing an arbitration clause, it waives its right to litigate disputes covered by the clause and it can be compelled to submit those disputes to arbitration.

Owners who favor arbitration, and would like the flexibility of being able to join the contractor and the owner's design engineer in a single arbitration proceeding, should provide for joinder and consolidation in both the construction contract and the design contract. The California public works arbitration statute authorizes such joinder of "any supplier, subcontractor, design professional, surety or other person who has so agreed and if the joinder is necessary to prevent a substantial risk of the party otherwise being subjected to inconsistent obligations or decisions." A "flow-down"

clause in a subcontract may incorporate an arbitration clause in the prime contract.<sup>304</sup> The arbitration clause will not be incorporated in the subcontract, however, unless it is clear that the subcontractor intended to submit to arbitration.<sup>305</sup>

#### 4. Partnering

Partnering is a nonbinding process initiated at the outset of the construction project. The process involves a workshop attended by the owner and the contractor. The workshop may be conducted by a professional facilitator who guides the discussions. The workshop is designed to accomplish several goals: First, it encourages the parties to recognize that it is in their interest to resolve problems as they arise rather than let them fester and grow into bigger problems. Partnering encourages the parties to trust each other and try to resolve their disputes through negotiations, rather than by litigation.

The partnering process was developed by the U.S. Army Corps of Engineers in the 1980s for a major construction project on the Columbia River. The purpose of partnering has been described as follows:

Partnering is the creation of an owner-contractor relationship that promotes achievement of mutually beneficial goals. It involves an agreement in principle to share the risks involved in completing the project, and to establish and promote a nurturing partnership environment. Partnering is not a contractual agreement, however, nor does it create any legally enforceable rights or duties. Rather, Partnering seeks to create a new cooperative attitude in completing government contracts. To create this attitude, each party must seek to understand the goals, objectives, and needs of the other—their "win: situations—and seek ways that these objectives can overlap."

Although partnering is a method of avoiding disputes rather than resolving them, it is still regarded as part of a dispute management system. The partnering process has been used by a number of state transportation agencies. The partnering workshop usually concludes with the parties signing a memorandum or part-

<sup>&</sup>lt;sup>295</sup> Stand. Spec. 105.22 (2000).

 $<sup>^{302}</sup>$  See § 7.10.c., supra, discussing considerations regarding the joinder of the owner's architect/engineer in the litigation between the owner and the contractor.

 $<sup>^{\</sup>tiny{303}}$  California State Contract Act, Public Contract Code, art. 7.2,  $\S$  10240.9.

 $<sup>^{\</sup>tiny 304}$  3A Indus. v. Turner Constr. Co., 869 P.2d 65 (Wash. App. 1993).

 $<sup>^{\</sup>rm 305}$  Gen. Railway Signal Corp. v. L.K. Comstock & Co., 678 N.Y.S.2d 208 (N.Y.A.D. 1998).

<sup>&</sup>lt;sup>306</sup> U.S. Army Corps of Engineers, *Partnering* (Pamphlet – 91-ADR-P-4).

<sup>&</sup>lt;sup>307</sup> Steven Pinnell, *Partnering and the Management of Construction Disputes*, 54 DISP. RESOL. J. No. 1, at 16 (Feb. 1999); James H. Kill, *The Benefits of Partnering*, 54 DISP. RESOL. J., No. 1, at 29 (Feb. 1999). (This article discusses the use of partnering by the Puerto Rico Dep't of Transportation in fashioning an ADR system for the *Tren Urbano* project, a regional rail transit system in San Juan.)

<sup>&</sup>lt;sup>308</sup> The following states have used partnering: Alaska, Arizona, California, Idaho, Kansas, Minnesota, Montana, North Carolina, North Dakota, New Mexico, Oregon, Texas, Utah, Washington, Wisconsin, and Wyoming. Source: Resolutions International, email: Norman Anderson@msn.com.

nering agreement.<sup>309</sup> The agreement provides that the contractor and the owner, with a positive commitment to honesty and integrity, agree that:

- a. Each will function within the laws and statutes applicable to their duties and responsibilities;
  - b. Each will assist in the other's performance;
  - c. Each will avoid hindering the other's performance;
- d. Each will proceed to fulfill its obligations diligently; and
- e. Each will cooperate in the common endeavor of the contract.  $^{\rm ^{310}}$

Partnering is not a quick fix for adversarial attitudes and antagonistic relationships that may exist between owners and contractors. Yet it can be a positive step toward improving communications between the parties and establishing a non-adversarial process aimed at resolving problems as they occur, rather than letting them fester and become worse.

#### 5. Conclusion

The high cost of litigation and arbitration for large, complex claims has caused owners and contractors to explore alternative means of resolving their disputes, other than through litigation or arbitration. Innovative owners and contractors have developed variations in traditional ADR techniques, such as hybrid mediation specifically tailored to meet the parties' needs. In the private sector, the trend has been toward greater use of the ADR process to resolve construction disputes. Many public contracting agencies have joined this trend.

As ADR becomes even more sophisticated, it is likely this trend will increase and more public contracting agencies will take advantage of the opportunities that ADR offers.

 $<sup>^{\</sup>tiny{309}}$  A partnering agreement does not change the terms of the contract, or alter the legal relationship of the parties to the contract, Arizona Standard Specification 104.01 (2000).

<sup>&</sup>lt;sup>310</sup> Arizona Standard Specification 104.01. The Specification provides that cost of the workshop will be shared equally by the owner and the contractor. The Arizona DOT partnering specification (104.01) is quoted at p. 52, in 52 DISP. RESOL. J. No. 3 (1997), *supra* note 189.
